Summary

Software Engineer with 5+ years of experience owning backend services, APIs, and product features end to end using **TypeScript**, **React**, **Node.js**, and **Python**. Skilled in designing **AI and agent systems**, shipping observable and well tested code, and handling sensitive data responsibly.

Technical Skills

Languages / Frameworks: TypeScript, **JavaScript**, **React**, **Node.js**, **Python**, **Kotlin**, **Java**, **Flutter**, **HTML5**, **CSS3**
Databases / Storage: PostgreSQL, **MySQL**, **Redis**, **DynamoDB**, **MongoDB**, **S3**
Cloud / DevOps: AWS, **Docker**, **Kubernetes**, **Terraform**, **GitHub Actions**, **CloudWatch**, **Datadog**, **OpenTelemetry**, **Claude Code**, **Cursor**
APIs / Integration: REST, **GraphQL**, **WebSockets**, **Kafka**, **OpenAPI**, **OAuth 2.0**, **JWT**, **LLM APIs**, **AI Agents**, **RAG**
Methods / Practices: Jest, **Pytest**, **TDD**, **Agile**, **Code Review**, **Pairing**, **Observability**, **Microservices**, **System Design**

Professional Experience

Software Engineer Aug 2025 – Present
McKinsey & Company *USA*

- Owned backend services and APIs end to end in **TypeScript**, **Node.js**, and **Python** for a client health engagement platform, from design through production operation.
- Built **AI agent** logic and **LLM** powered conversation flows with **RAG** retrieval, designing the interaction between agent output and the patient facing interface.
- Handled sensitive health data responsibly, adding role based access, audit logging, and encryption controls aligned with privacy and security expectations.
- Identified an ambiguous drop-off in a multi-step coaching flow, instrumented events and reworked the sequence to improve completion rates.

Software Engineer Feb 2022 – Jul 2024
Accenture *Bengaluru, India*

- Developed full stack product features in **TypeScript**, **React**, and **Node.js** for consumer facing applications, delivering iteratively within **Agile** sprints.
- Integrated **React** interfaces with **REST** and **GraphQL** services backed by **PostgreSQL**, replacing legacy screens with responsive component views.
- Built **Redis** caching and **Kafka** consumers for high-volume activity data, reducing database load during peak usage periods.
- Wrote **Jest** and **Pytest** suites across UI and service layers, raising module coverage from 64% to 87% under **TDD** practices.

Software Engineer Jun 2020 – Jan 2022
Wipro *Bengaluru, India*

- Built backend services in **Java** and **Python** supporting **REST** integrations between legacy and modern enterprise systems.
- Optimized slow **SQL** queries against **PostgreSQL** and **MySQL** databases, reducing report execution times by up to 40% for production users.
- Resolved production defects and authored integration and test documentation, supporting handoffs between application and database support teams.
- Refactored a monolithic nightly data routine into staged validation jobs, cutting failure recovery time from hours to minutes during processing windows.

Projects

AI Health Coaching Assistant | TypeScript, Node.js, LLM APIs, RAG, PostgreSQL

- Built an AI coaching assistant with a **React** front end and **Node.js** services that uses **RAG** over curated content to answer patient questions.
- Added evaluation scoring, escalation paths for risky responses, and privacy controls so sensitive inputs are never persisted unnecessarily.

Care Plan Tracking Service | Python, PostgreSQL, Redis, Docker, AWS

- Developed a **Python** service tracking care plan progress with **PostgreSQL** storage, **Redis** caching, and **Docker** deployment on **AWS**.

Education

New York University
Master of Science, Computer Engineering — GPA: 3.63
